DEPT. OF PLANNING, CONSERVATION, AND DEVELOPMENT

00 AUG -9 PM 1:00

Mr. James Sipperly  
Department of Planning, Conservation, and Development  
City of Middletown  
245 DeKoven Drive  
Room 202  
Middletown, CT 06457

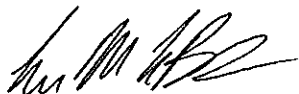

Re: Phase I and Phase II Environmental Site Assessments  
Former Middletown Police Station  
62-66 Church Street  
Middletown, Connecticut 06457

Dear Mr. Sipperly:

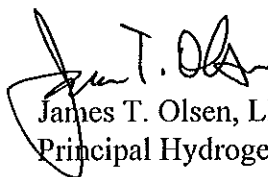

Please find enclosed a copy of the Phase I and Phase II Environmental Site Assessments for the above referenced site located in Middletown, Connecticut.

Please contact either of us if you have any questions or comments.

Sincerely,  
Marin Environmental, Inc.

## EXECUTIVE SUMMARY

Marin has completed a Phase I Environmental Site Assessment (ESA) of the Former Middletown Police Department located at 62-66 Church Street within the City of Middletown, Connecticut. The study site is comprised of two parcels addressed as 66 Church Street and 62 Church Street. 66 Church Street is referenced by the Middletown Tax Assessor's Office on Map 24/Block 23-33/Lot 20 and 62 Church Street is referenced by the Middletown Tax Assessor's Office on Map 24/Block 23-33/Lot 19. The Phase I ESA is intended to evaluate the potential for subsurface contamination from oils or hazardous chemicals due to existing or past land use practices at the study site and at off-site properties, as well as to identify other adverse environmental conditions that may be present. It is additionally intended to document the current regulatory status of the site.

The study site (62 and 66 Church Street) is approximately .73 acres and contains landscaped areas, asphalt paved parking areas, and a two-story concrete block and brick building constructed in approximately 1925 and added on to in approximately 1948. 66 Church Street has been used, historically, as a technical school from approximately 1925 to 1963, and police station from approximately 1963 to 1999. Prior to the construction of the technical school, the study site was used for residential purposes. The eastern area of the study site identified as 62 Church Street has been used, historically, for residential purposes from approximately 1884 to 1970, and a parking area from approximately 1970 to present.

According to a CTDEP Spill Report dated February 20, 1991, an unknown quantity of gasoline was discharged at the site from a leaking underground storage tank (UST). According to the report, the UST was removed and ground water may have been affected.

One gasoline UST, used to fuel police vehicles, is located adjacent to the northwestern section of the study site building. A fuel dispensing pump, catch basin, fill pipe, and vent pipe were observed in this area. Additional USTs were not observed at the site. In addition, information regarding additional USTs on the study site was not found in Municipal or State files.

The northern section of the study site building was identified as an automobile repair area, presumably, in conjunction with the technical school. Floor drains were observed throughout the northern section and central section of the study site building. Information regarding the discharge points of these floor drains was not located in Municipal or State files.

A firing range was observed on the northern section of the study site building. This area was observed to contain firing booths, a target butt area, and stored computer equipment. Apparently, this area was used by the police department for firearm practice. The target butt area was observed to contain gravel, sand, and slag within a wood bermed area in which spent bullets were collected.

Various containers of kerosene, hydraulic oil, refrigeration oil, pump oil, Arcton 22 (chlorofluoromethane), and suspect mercury containing bulbs were observed throughout the northern and central section of the study site building.

The study site building utilized natural gas to heat the building for approximately 20 years (1979) prior to the building being vacated. Information regarding a heat source prior to approximately 1979 was not located in Municipal or State files. Information regarding any fuel oil USTs on the study site was not found in Municipal or State files.

Marin recommends that a Phase II Environmental Site Assessment be conducted to evaluate specific areas of concern. The specific areas of concern identified in this Phase I ESA include:

- The soil and ground water adjacent to the gasoline UST should be evaluated to determine if a release has occurred or if remnants from the historical release from the previous UST remain.
- Suspect floor drains located throughout the northern section of the study site building should be investigated to determine points of discharge.
- The material located in the target butt area of the firing range should be sampled and analyzed to determine its proper waste disposal classification.

## 1.0 INTRODUCTION

### 1.1 *Purpose of Study*

The purpose of this Phase I Environmental Site Assessment (ESA) is to evaluate the likelihood of on-site contamination due to spills or leaks of oils or hazardous materials resulting from past and present site operations and/or land use activities, or from off-site activities. The purpose is also to identify other adverse environmental conditions associated with the study site.

### 1.2 *Property Location and Ownership*

The study site is located within a commercial/industrial zoned area of Middletown, Connecticut. According to the City of Middletown Tax Assessor's files, the site is identified on Map 24/Block 22-23/Lot 20 and Map 24/Block 22-23/Lot 19. The current owner of the property is the City of Middletown. The site is bounded to the north, east, and west by residential property; and to the south by Church Street.

Refer to Figures 1 and 2 for the Site Location Map and Site Plan, respectively.

### 1.3 *Date of Study*

Authorization to proceed on this project was granted in June 2000 by the City of Middletown, site owner. Lee LeBlanc, an Environmental Scientist at Marin, conducted the site inspection and municipal research on June 28, 2000 and the Connecticut Department of Environmental Protection (CTDEP) file review and State Library historical research were completed on July 6, 2000. The report is dated July 2000.

#### 1.4 *Scope of Work*

The following scope of work was performed in accordance with standard Marin protocols and provides conclusions relative to the release of oils or hazardous materials on-site, the environmental liabilities associated with the site, and other adverse environmental conditions that may be present.

1. Middletown Tax Assessor and Clerk files were reviewed to determine the history of site ownership. Historical aerial photographs for the study site were reviewed for the years 1934, 1951, 1965, 1970, 1975, 1980, 1986, 1990, and 1995. Sanborn Fire Insurance Maps for the study site were reviewed for the years 1884, 1889, 1895, 1901, 1907, 1913, 1924, 1950, and 1979. Middletown street directories were also reviewed to evaluate previous site and area occupancy.
2. A VISTA Information Solutions StarView™ database search of State and Federal records was conducted in accordance with ASTM Standards.
3. Pertinent CTDEP records were reviewed for current and historical regulatory information concerning the study site and nearby properties.
4. The Middletown Planning and Zoning Department, Building Department, Engineering Department, Health Department, Sewer and Water Department, and Fire Marshal's office were contacted for information regarding site conditions, usage, violations and orders.
5. The site and surrounding areas were visually inspected for indications of spills of oils or hazardous material, and other adverse environmental impacts that might affect the site.

6. Local officials and other knowledgeable persons were interviewed regarding on-site operations, land use, and historical incidents that may have had adverse environmental impacts.

The scope of work completed for this assessment did not include the sampling and chemical testing of septic liquid or sludge, surface water, ground water, sediment, soil, polychlorinated biphenyls (PCBs) containing fluids, asbestos containing building materials (ACBMs), or lead based paint.

#### 1.5 *Summary of Previous Environmental Site Assessments*

Marin has neither completed nor received any previous environmental site assessments regarding this site.

A hazardous materials survey was performed by Marin Environmental, Inc. in July 2000 to determine if any ACBMs or lead based paint were present in the site building. Findings of this survey are detailed in a Marin report titled Hazardous Materials Survey, Former Middletown Police Station, 62-66 Church Street, Middletown, Connecticut, July 2000.

## 2.0 CURRENT SITE AND AREA CHARACTERISTICS

The site inspection was performed to view current site conditions and to detect visible evidence of adverse environmental conditions, if any. Limitations to the site inspection, if any, are reported in Section 8.0 of this report.

### 2.1 *Site Inspection*

The site was inspected by Lee LeBlanc, an Environmental Scientist at Marin, on June 28, 2000. The site inspection included walking the approximate perimeter of the site and inspecting key features of the site. Site photographs taken at the time of the site inspection are included in Appendix A.

### 2.2 *Site Description and Operations*

The study site is approximately .73 acres and contains landscaped areas, asphalt paved parking areas and a two-story concrete block and brick building constructed in approximately 1925, and added on to in approximately 1948. The property is currently owned by the City of Middletown and is currently vacated. According to a City of Middletown Property Description Card, 66 Church Street was acquired by the City of Middletown in approximately 1925 and 62 Church Street was acquired by the City of Middletown in approximately 1972. According to historic Sanborn Fire Insurance Maps and Middletown City Street Directories, the study site building has been used, historically, as a technical school from approximately 1925 to 1963, and police station from approximately 1963 to 1999. According to the 1950 Sanborn Map, the northern section of the study site building was utilized as an automobile repair area presumably in conjunction with the technical school. According to a property map of 66 Church Street dated August 1923, the study site contained a residential dwelling on the southwestern section of the site. The eastern area of the study site, identified as 62 Church Street, has

been used, historically, for residential purposes from approximately 1884 to 1970, and a parking area from approximately 1970 to present.

The elevation of the site is approximately 80 feet National Geodetic Vertical Datum (NGVD) according to the topographic map of the Middletown Quadrangle. The site topography is generally level.

Based on information reviewed, the site does not appear to meet the definition of a Hazardous Waste Establishment and, therefore, would not be regulated under the Connecticut Transfer Act (C.G.S. 22a [a-d] as revised by Public Act 97-218).

Additional details relating to site operations and historical regulatory documentation are included in Section 3.0 and 4.0 of this report.

### 2.3 Utilities

The study site is currently vacated. Utilities have been disconnected. The study site formerly used municipal water and sewer. Electricity was supplied to the site by Connecticut Light and Power (CL&P). According to Middletown Police Department personnel, the study site building utilized natural gas to heat the building for approximately 20 years (1979) prior to the building being vacated. Both Yankee Gas and Connecticut Natural Gas were contacted for information regarding how long the study site had utilized natural gas. Both companies did not have information on record regarding the site (66 Church Street). However, Yankee Gas did have information regarding 64 Church Street which may have been the address of the study site at the time of gas connection. Yankee Gas personnel stated that 64 Church Street was serviced from October 1997 to October 1999. Information prior to October 1997 was not available with Yankee Gas personnel. Information regarding a heat source prior to approximately 1979 was not located in Municipal or State files nor was any information found regarding any fuel oil USTs on the study site.

## 2.4 *Building Hazards*

Possible asbestos containing building materials (ACBMs) observed during the site inspection include pipe insulation, and floor and ceiling tiles located throughout the study site building.

A hazardous materials survey was performed by Marin Environmental, Inc. in July 2000. Findings of this survey are detailed in a report titled Hazardous Materials Survey, Former Middletown Police Station, 62-66 Church Street, Middletown, Connecticut, July 2000.

## 2.5 *Underground and Aboveground Storage Tanks*

According to visual observation, one gasoline UST was located adjacent to the northwestern section of the study site building. A fuel dispensing pump, catch basin, fill pipe, and vent pipe was observed in this area. Apparently, this tank was used to fuel police vehicles. According to a Middletown Police Department letter to the CTDEP dated March 7, 1991, one, 3,000-gallon gasoline UST was removed from the site on March 1, 1991. The tank was removed because it did not meet National Fire Protection Association (NFPA) 329 criteria (Tightness Test). The former gasoline UST was likely removed from the area of the current gasoline UST. Additional information regarding the tank removal or the replacement tank was not found in Municipal or State files. Information regarding additional USTs was not found in Municipal or State files.

No aboveground tanks were observed during the site walk.

## 2.6 *Site Geology/Hydrogeology*

According to the USGS 7.5 minute topographic map of the Middletown, Connecticut quadrangle, the site is located at an approximate elevation of 80 feet National Geodetic Vertical Datum (NGVD). The site topography is generally level. Surface runoff from and ground water beneath the site are both likely to flow in a east-northeasterly direction towards the Connecticut River located approximately 2,500 feet east of the study site.

Ground water in the site area is classified as GB by the CTDEP. Class GB ground waters designate highly urbanized areas or areas of intense industrial activity and where public water supply is available. This water may not be suitable for direct human consumption due to waste discharges, spills or leaks of chemicals or land use impacts. The CTDEP's goal is to prevent further degradation by preventing any additional discharges which would cause irreversible contamination.

The Connecticut River located approximately 2,500 feet east of the study site is classified as SB by the CTDEP. Class SB surface waters are known to meet Water Quality Criteria which support designated uses.

According to the Bedrock Geologic Map of Connecticut, the site is underlain by the Portland Arkose which is a reddish-brown arkose (brownstone).

According to the Surficial Geology Map of Connecticut, the site is underlain by areas of thick till. This area is composed of till greater than 10-15 feet in thickness including drumlins in which till thickness commonly exceeds 100 feet (maximum recorded thickness is about 200 feet).

## 2.7 *Site Reconnaissance*

Visual inspection of the study site was made by Lee LeBlanc, an Environmental Scientist at Marin, on June 28, 2000. Photographs taken at the time of the inspection are provided in Appendix A. Site improvements, features and observations are described below. Figure 2, the Site Plan, identifies the key features observed and their approximate locations.

The study site, located at 62-66 Church Street within the City of Middletown, Connecticut, consists of approximately .73 acres of landscaped areas, asphalt paved parking areas and a two-story concrete block and brick building constructed in approximately 1925, and added on to in approximately 1948. The study site building was observed to be constructed of a concrete slab foundation and concrete block and brick walls with a built -up (gravel, asphalt) roof. The interior of the building was constructed generally of wall to wall carpeted areas, 9"x9" and 12"x12" vinyl floor tiles, sheetrock, wood paneling, brick, and concrete block walls, 2'x4' and 2'x2' acoustical ceiling tiles, and wood ceilings. The study site building consisted of two stories on the southern section of the building, a basement on the central section of the building, and one story on the northern section of the study site building. The study site building is currently vacated. According to historic Sanborn Fire Insurance Maps and Middletown City Street Directories, the study site building has historically been used as a technical school and police station. The eastern area of the study site, identified as 62 Church Street, has been used, historically, for residential purposes from approximately 1884 to 1970, and a parking area from approximately 1970 to present.

The study site building appears to have experienced excessive water damage since the Middletown Police Department vacated the site in approximately September 1999. Significant damage to ceiling and floor tiles, sheetrock walls, and the remaining equipment left in the building was observed. A heavy odor of mold and decomposition was observed throughout the study site building. In many areas throughout the study site

building, mold and fungi were observed growing on wall, floor, and furniture surfaces. Respirators and protective clothing (rubber gloves, tyvek suits) were used in this assessment. Electrical power to the study site has been disconnected, therefore, flashlights were used where sufficient lighting was not available.

The southern section of the study site building consisted of two stories. The first and second floors of the study site building consists of general office space, a photo lab, kitchen areas, bathrooms, maintenance closets, storage areas, and men's and women's cellblocks and locker rooms.

General office space was located throughout the first and second floors of the southern section of the study site building. This office space, including a classroom area, was formerly used by various divisions of the Middletown Police Department. Other areas associated with general office space include computer rooms, an evidence room, a juvenile detention room, an arms room, and a supply room. These spaces are currently vacant. The office areas contained remaining general office accessories including desks, chairs, shelves, computers, and audio and visual equipment. Water damage was significant throughout these areas and a heavy odor of mold and decomposition was observed. No hazardous materials were observed in these offices areas. In addition, no unusual staining other than water damage was observed in the office areas.

A photo lab was observed on the first floor of the southern section of the study site building. The photo lab area contained a film development area, a sink, and storage shelves. A heavy odor of mold and decomposition was observed throughout this area. No hazardous materials were observed in the photo lab. In addition, no unusual staining other than water damage was observed in the photo lab.

Kitchen areas were observed on the first and second floors of the southern section of the study site building. These areas were observed to consist of general kitchen furniture and accessories including tables, chairs, refrigerators, stoves, cabinets, and shelving. Water

damage was significant throughout these areas. A heavy odor of mold and decomposition was also observed throughout these areas. No hazardous materials were observed in the kitchen areas. No unusual staining other than water damage was observed in these areas.

Bathrooms were located on the first and second floors of the southern section of the study site building. These areas were observed to contain bathroom stalls and sinks and floor drains were observed throughout the area. It is likely that these floor drains discharge to the municipal sewer system. Water damage was not as significant in the bathroom areas. No hazardous materials were observed in the bathroom areas. In addition, no unusual staining was observed in these areas.

Maintenance closets and storage areas were observed on the first and second floors of the southern section of the study site building. These areas were observed to contain desks, chairs, sinks, shelving, and cabinets. Water damage was evident throughout these areas. A heavy odor of mold and decomposition was observed throughout these areas. No hazardous materials were observed in these areas.

Men's and women's cellblocks were observed on the first floor of the southern section of the study site building. These areas were locked and, therefore, an evaluation of their condition could not be made.

Men's and women's locker rooms were observed on the second floor of the southern section of the study site building. These areas consisted of lockers, shower stalls, bathroom areas, and sauna. Floor drains were observed throughout the locker room areas. It is likely that these drains discharge to the municipal sewer system. Water damage was significant throughout these areas. No hazardous materials were observed being stored in these areas.

The central section of the study site building consisted of a stairway and an unfinished basement. The basement was observed to contain a boiler room and an air delivery

systems room. The boiler room was observed to contain a gas fired boiler, two 100-gallon water heaters, electrical panel, and a generator. A floor drain was observed within the boiler room. The discharge point of this floor drain is unknown at this time. Minimal staining was observed on the concrete floor of the boiler room. The air delivery systems room was observed to contain an air delivery system mechanism. Heavy staining was observed beneath the air delivery system mechanism. One, one-gallon plastic container of refrigeration oil, one, one-gallon plastic container of pump oil, and four, 50 pound steel cylinders containing Arcton 22 (chlorofluoromethane) were observed in the air delivery systems room. No staining was observed adjacent to these containers. A slight odor of mold was observed in these areas. Water damage was not evident in either of the two rooms located in the basement.

The northern section of the study site building consists of a firing range, garage area, fitness room, storage areas, bathroom, and shower area. A slight odor of mold was observed in these areas. Water damage was observed but was not as significant as the southern section of the study site.

A firing range was observed on the northern section of the study site building. This area was observed to contain firing booths, a target butt area, and stored computer equipment. Apparently, this area was used by the police department for firearm practice. The target butt area located at the northern section of the firing range was used to collect spent bullets which were discharged from the firearms. The target butt area was observed to contain gravel, sand, and slag within a wood bermed area in which spent bullets were collected. Significant water damage was not evident in the firing range area. No hazardous materials were observed in this area. No staining was observed in this area.

A garage area, with one over head garage door, was observed on the northern section of the study site building. This area was observed to contain file drawers, chairs, shelving, boxes of paper, and a natural gas powered generator. File drawers, chairs, shelving, and various boxes of paper were observed throughout the main area of the garage. A natural

gas powered generator was located on the southern section of the garage area. Heavy staining was observed adjacent to the generator. In addition, one, steel container of kerosene, one, plastic container of a red hydraulic oil, and one, cardboard container labeled "waste mercury containing lamps" containing fluorescent lamps were observed on the southern section of the garage area. Minimal staining was observed throughout the concrete floor of the garage area. Due to the storage of several file drawers, chairs, shelving and boxes, a complete evaluation of the concrete floor could not be conducted.

A bathroom area was observed on the northern section of the study site building. This area consisted of bathroom stalls, sinks, lockers, and a shower area. Two floor drains were observed throughout the bathroom area. The discharge points of these floor drains are unknown at this time.

A fitness room was observed on the northern section of the study site building. This room contained various fitness machines. Minimal water damage was observed in this area. No hazardous materials were observed in this area. No staining was observed throughout the fitness room area.

Three storage areas were observed throughout the northern section of the study site building. One area was observed to be caged-in and consisted of a concrete berm within the storage area. A floor drain was observed in the corner of this caged-in storage area. Two additional storage areas were observed throughout the northern section of the study site. These storage areas were observed to contain shelving. No hazardous materials were observed in these areas. No unusual staining was observed in these storage areas. The discharge point of the floor drain is unknown at this time.

One gasoline UST was located adjacent to the northwestern section of the study site building. A fuel dispensing pump, catch basin, fill pipe, and vent pipe were located adjacent to the northwestern section of the study site building. A concrete pad was observed in the area atop of the gasoline UST. This UST was used to fuel police

vehicles. Information regarding the present gasoline UST was not located in Municipal or State files. According to a Middletown Police Department letter to the CTDEP dated March 7, 1991, one, 3,000-gallon gasoline UST was removed from the site on March 1, 1991. The tank was removed because it did not meet NFPA 329 criteria (Tightness Test). Information regarding the installation of this tank was not found. Additional information regarding the tank removal or replacement tank was not found in State or Municipal files. Information regarding additional USTs at the study site was not available in Municipal or State files.

An additional catch basin was observed adjacent to the northern section of the study site building.

A radio/transmission tower was observed adjacent to the west of the central section of the study site. This tower was likely used for communication purposes.

A driveway was observed leading from the northern section of the study site to William Street to the north. Two catch basins were observed within this driveway. According to the City of Middletown Tax Assessor's map and other Municipal files, this driveway is not part of the study site. It is likely that this driveway was used as a right-of-way for the former Middletown Police Station.

Asphalt paved parking areas and landscaped areas were observed on the eastern, western, southern and northern sections of the study site. Specifically, an asphalt paved parking area located on the eastern section of the study site was observed. According to the City of Middletown Tax Assessor's Map, this parking lot is addressed as 62 Church Street (Map 24/Block 23-33/Lot 19). No unusual staining, stressed vegetation or unusual odors were observed throughout these asphalt paved areas.

Several of the former windows located on the study site building were observed to be filled in or covered by concrete blocks.

## 2.8 *Area Reconnaissance*

According to the City of Middletown Planning & Zoning Department, the site area is zoned "Commercial/Industrial". The site is bounded to the east, north, and west by residential property; and to the south by Church Street.

### 3.0 SITE AND AREA HISTORY

#### 3.1 *Historical Ownership*

Historical ownership of the property and buildings on the site has been researched through the City of Middletown Town Clerk's files. The following table summarizes the information reviewed.

Owner of Record	Dates of Ownership
Caroline Nichols Estate	4/8/10
Richard Fagan	5/21/10
Charles G.P. Vinal & Amelia Vinal	12/1/23
City of Middletown (School District)	5/7/25-present

According to a City of Middletown Property Description Card, the eastern section of the study site was acquired by the City in approximately 1972. This area is addressed as 62 Church Street. According to aerial photographs and historic Sanborn Fire Insurance Maps of the study site, the eastern section of the site was used, historically, for residential purposes from approximately 1884 to 1970, and as a parking area for the police station from approximately 1970 to present.

#### 3.2 *Aerial Photograph Review*

Aerial photographs from the years 1934, 1951, 1965, 1970, 1975, 1980, 1986, 1990, and 1995 were reviewed for signs of large-scale staining, filling, dumping, or excavating at the site or in the vicinity, as well as for indication of on-site activities. Aerial Photographs are described below. Copies of the 1965 through 1995 aerial photographs are included in Appendix A.

### 1995 - 1975 Aerial Photographs

The study site and surrounding properties appear similar to present day conditions.

### 1970 - 1951 Aerial Photographs

The study site appears to be similar to present day conditions. A residential structure was observed on the eastern section of the study site. Abutting properties include residential property to the north; east, and south; and industrial property to the west.

### 1934 Aerial Photograph

The northern section of the study site building was not constructed. The northern section of the study site was observed to be vacant land. The southern section of the study site building was present. Abutting properties appeared to be similar to the 1970 - 1951 aerial photographs.

## 3.3 *Street Directories and Sanborn Maps Review*

### Street Directories

Middletown City Street Directories were reviewed for the site. Results of the findings are listed below:

Street Number	Site Occupant	Years of Occupancy
66 Church Street	City of Middletown	1989
66 Church Street	City of Middletown (Parking Authority)	1984
66 Church Street	Police Department (Parking Authority)	1979
64 Church Street	Police Department	1973
64 & 66 Church Street	Police Department	1968
66 Church Street	Vacant	1963

64 Church Street	Vinal Regional Technical School	1958-1948
64 Church Street	State Trade School	1943-1938
66 Church Street	State Trade School	1933-1928
66 & 68 Church Street	State Trade School	1926

According to a City of Middletown Property Description Card, the eastern section of the study site was acquired by the City in approximately 1972. This area is addressed as 62 Church Street. According to aerial photographs and historic Sanborn Fire Insurance Maps of the study site, the eastern section of the site was used, historically, for residential purposes from approximately 1884 to 1970, and as a parking area for the police station from approximately 1970 to present.

#### Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were reviewed for the years 1884, 1889, 1895, 1901, 1907, 1913, 1924, 1950, and 1979. The site was depicted in each of the maps. Copies of the Sanborn Maps are included in Appendix B Site Documentation.

#### 1979 Sanborn Map

The study site and surrounding area appeared similar to present day conditions.

#### 1950 Sanborn Map

The study site appeared similar to present day conditions. The study site building was identified as the Vinal Regional Technical School (State Trade School). The northern section of the study site building was identified as an automobile repair area. A garage was identified on the northwestern section of the study site. Two residential dwellings were identified on the eastern section of the study site (62 Church Street). The surrounding area contained residential dwellings to the north, east, and west. The Good Year Rubber Company was identified abutting the study site to the west and northwest. In addition, two buildings identified as an auto sales and service facility and a steam laundry facility were identified as

containing one gasoline tank each. The sales and service facility, and laundry facility were both located approximately 275 feet west of the study site.

#### 1924 Sanborn Map

The study site contained the southern section of the study site building and the basement adjacent to the north of the building. The northern section of the study site was identified as vacant. The study site building was identified as the State Trade School and used electricity for lighting and generated steam for heat. Two residential dwellings were identified on the eastern section of the study site. The Westinghouse Lamp Company was identified as abutting the study site to the west and northwest. The W.S. Reynolds Service Station, containing one gasoline tank, was located approximately 275 feet to the west of the study site. The laundry facility, identified in the 1950 Sanborn Map, located approximately 275 feet to the west of the study site, and containing one gasoline tank, was not observed in the 1924 Sanborn Map. The remaining surrounding area appeared similar to the 1950 map.

#### 1913 Sanborn Map

The study site was identified as containing three, two-story residential dwellings located on the southwestern and eastern sections of the study site. The northern and eastern section of the study site was observed to be vacant. A mill identified as vacant and owned by Dale D. Hunter was identified approximately 50 feet northwest of the study site. The W.S. Reynolds Carriage and Furniture Repair facility, containing one underground gasoline tank, was identified approximately 275 feet west of the study site. The W&B Douglas Pump Manufacturing Company was identified approximately 300 feet northeast of the study site across Broad Street. The remaining surrounding area appeared similar to the 1924 map.

#### 1907 Sanborn Map

The study site appeared similar to the 1913 map. The Leeds and Catlin Company, manufacturer of phonograph records, was identified approximately 50 feet northwest of the study site. The W.S. Reynolds Carriage manufacturing facility was identified approximately 275 feet west of the study site. No gas tank was observed on the W.S. Reynolds Carriage property. The remaining surrounding area appeared similar to the 1913 map.

#### 1901 Sanborn Map

The study site appeared similar to the 1907 map. A building located on the northeastern section of the study site was identified as an architects office. The American Surety Company (formerly Schuyler Electric Company), manufacturers of dynamos and street lamps, was identified approximately 50 feet northwest of the study site. The remaining surrounding area appeared similar to the 1907 map.

#### 1895 & 1889 Sanborn Maps

The study site appeared similar to the 1901 map. The Schuyler Electric Company, manufacturers of dynamos and street lamps, was located approximately 50 feet northwest of the study site. The remaining surrounding area appeared similar to the 1901 map.

#### 1884 Sanborn Map

The study site appeared similar to that of the 1895 and 1889 maps. Two residential dwellings were identified on the study site. The remaining surrounding area was identified as containing residential dwellings.

**SITE REGULATORY INFORMATION****4.1 *Pertinent File Review/Research***

Marin reviewed municipal records for permits, environmental violations, infractions, incidents, complaints and orders relating to the study site. Marin additionally performed a search of State and Federal databases for the site and surrounding areas by use of the VISTA StarView™ computer search system. A copy of the VISTA report is provided in Appendix D. Additional sources of information reviewed for this assessment included the:

- CTDEP List of Property Transfer filings under the Connecticut Transfer Act;
- CTDEP Leachate and Wastewater Discharge Sources Map;
- CTDEP Water Quality Classifications Map;
- CTDEP Water and Waste Management Bureau public files; and
- CTDEP Spill incident reports, 1978-2000.

**4.2 *Results of Regulatory Review***

The State and Federal databases searched under the scope of this site assessment do not list the site as a National Priority List (NPL) site, RCRA Corrective Action site, or a State equivalent priority list (SPL) site. The site is not listed as a RCRA-permitted Treatment, Storage, Disposal (RCRA-TSD) facility, a State Equivalent CERCLIS List (SCL) facility, a LUST site, an US EPA CERCLIS/NFRAP site, or a registered Solid Waste Landfill. The site is not included in the Toxic Release Inventory (TRIS) database and is not listed as a RCRA Generator of Hazardous Waste, RCRA Violator or containing USTs.

The State and Federal databases searched under the scope of work of this assessment did list the site as a Spills Site.

According to the VISTA report, an unknown quantity of a petroleum substance was discharged at the study site on July 9, 1996. The report stated that surface water was affected and the case is closed. Additional information regarding the release was not available.

*City of Middletown Building Department*

Information regarding the environmental integrity of the study site was not on file with the City of Middletown Building Department.

*City of Middletown Health Department*

There was no information regarding the study site on file with the City of Middletown Health Department.

*City of Middletown Fire Marshal's Office*

According to files located with the City of Middletown Fire Marshal's Office, one, 3,000-gallon gasoline UST was removed from the site on March 1, 1991. The tank was removed because it did not meet NFPA 329 criteria (Tightness Test). Additional information regarding the tank removal was not found in State or Municipal files. Information regarding spills, violations or orders at the study site were not located in the files. Information regarding additional USTs at the study site was not located in Municipal or State files.

### City of Middletown Engineering Department

Information regarding the environmental integrity of the study site was not on file with the City of Middletown Engineering Department. Property maps dated August 1923 and May 1965 depicting 66 Church Street were provided by the Engineering Department.

### City of Middletown Sewer and Water Department

The Middletown Sewer and Water Department had no information regarding the discharge points of the floor drains within the building at 66 Church Street. Sewer connection dates for 66 Church Street were obtained. The southern section of the study site building, constructed in approximately 1925, was connected to the sewer on October 22, 1924. The northern section of the study site building, constructed in approximately 1948, was connected to the sewer on December 9, 1948. Additional information regarding the environmental integrity of the study site was not on file with the City of Middletown Sewer and Water Department.

### CTDEP

According to a CTDEP Spill Report dated February 20, 1991, an unknown quantity of gasoline was discharged at the site from a leaking underground storage tank (UST). According to the report, the tank was removed and ground water may have been affected. Reportedly, the case is closed.

According to a CTDEP Spill Report dated December 22, 1995, approximately three gallons of toilet cleaner/chlorine mix was discharged inside the building. According to the report, the spill was dispersed and the case is closed.

## 5.0 AREA REGULATORY INFORMATION

### 5.1 *Pertinent File Review/Research*

Pertinent Local, State, and Federal files and lists identified in Section 4.1 of this report were reviewed for environmental report infractions, incidents, complaints, and permits associated with the properties within the site vicinity. Copies of documents regarding properties within the site vicinity are included as Appendix C. A copy of the VISTA StarView™ search pertaining to the area sites are included in Appendix D.

### 5.2 *Results of Regulatory Review*

According to the VISTA report, there are no National Priorities List (NPL) sites or State equivalent Priority List (SPL) sites within a one-mile radius of the site. There were two RCRA Corrective Actions sites within a one-mile radius of the study site.

There are no RCRA Treatment Disposal Storage Facility (TSD) sites or Solid Waste Landfill sites within a half-mile of the site. There were two State Equivalent CERCLIS List (SCL) sites, one CERCLIS/NFRAP site, eight Leaking Underground Storage Tank (LUST) sites, and 12 spill sites within a one-half mile radius of the study site.

There are no Toxic Release Inventory System (TRIS) sites, or RCRA violation sites within a one-eighth mile radius of the study site. Six registered underground storage tank (UST) sites and two RCRA hazardous waste generators (GNRTR) were located within a one-eighth mile radius of the study site.

VISTA information is included in Appendix D.

#### RCRA Corrective Actions (CORRACTS)

Two RCRA Corrective Actions (CORRACTS) sites were identified by the VISTA report within a one mile radius of the study site. North Judd/GW located at 56 Pameacha Avenue, approximately 0.52 miles south of the study site; and Fenner America, Ltd., located at 400 East Main Street, approximately 0.78 miles south of the study site were reported as RCRA Corrective Actions (CORRACTS) sites.

#### State Equivalent CERCLIS List (SCL)

Two State Equivalent CERCLIS List (SCL) sites were identified by VISTA within a one-half mile radius of the study site. Northeast Utilities, located on Dekoven Drive, approximately 0.21 miles east of the study site; and Liberty Ltd. Partnership, located at 605 Main Street, approximately 0.41 miles north of the study site were reported as State Equivalent CERCLIS List (SCL) sites.

#### CERCLIS/NFRAP List

One CERCLIS/NFRAP site was identified by VISTA within a one-half mile radius of the study site. Jem Wire Products, located at 50 Walnut Street, approximately 0.34 miles east of the study site was reported as a CERCLIS/NFRAP site.

### Leachate and Wastewater Discharge Sources

According to the Leachate and Wastewater Discharge Sources (LWDS) inventory for the Lower Connecticut River Basin, the site is located within Sub-Basin 4013, Sumner Brook. The LWDS sites identified within a half mile radius of the site include the City of Middletown, approximately 0.5 miles east of the study site, which is listed as a former Sewage Treatment Plant; and the City of Middletown, approximately 0.5 miles east of the study site, which is listed as an active Sewage Treatment Plant discharging to Basin 4000.

### 5.3 *Underground Storage Tanks/Oil & Chemical Spill Incidents*

#### Leaking Underground Storage Tanks

The VISTA report identified eight LUST sites within a half-mile radius of the site.

On June 30, 1994, one steel 1,000-gallon #2 heating oil UST located at Wesleyan University at 157 Church Street approximately 0.18 miles southwest of the study site was reported as leaking. According to the report, affected soil was removed and the case is closed.

On August 5, 1998, one 1,000-gallon # 2 heating oil UST located at Wesleyan University at 156 High Street approximately 0.23 miles southwest of the study site was reported as leaking. According to the report, affected soil and the tank were removed. According to the report ground water may have been affected. Reportedly, the case is closed.

On March 1, 1999, one 1,000-gallon # 2 heating oil UST located at 137 Mill Street approximately 0.22 miles south of the study site was reported as leaking.

According to the report, approximately five yards of affected soil and the tank was removed. Reportedly, the case is closed.

On June 20, 1997, one diesel fuel UST located at 104 East Main Street approximately 0.33 miles east of the study site was reported as leaking. According to the report, affected soil and the tank were removed. Reportedly, the case is closed.

On March 5, 1995, one steel 2,000-gallon #2 heating oil UST located at The Connection, Inc. located at 605 Main Street approximately 0.41 miles north of the study site was reported as leaking. Reportedly, the case is closed.

On February 2, 1989, one steel gasoline UST located at Personal Auto Care located at 168 East Main Street approximately 0.43 miles southeast of the study site was reported as leaking. According to the report affected soil was removed. Reportedly, the case is closed.

On September 21, 1998, one 275-gallon waste oil UST located at the Gulf Oil Station located at 168 East Main Street approximately 0.43 miles southeast of the study site was reported as leaking. According to the report, the tank was pumped out, removed, and affected soil was removed. Reportedly, the case is closed.

On February 28, 1990, one steel 6,000-gallon and one steel 10,000-gallon #2 heating oil UST located at the U.S. Post Office located at 11 Silver Street approximately 0.50 miles southeast of the study site was reported as leaking. According to the report, affected soil was removed. Reportedly, the case is closed on the 6,000-gallon UST but open on the 10,000-gallon UST.

### Registered Underground and Aboveground Storage Tanks

The VISTA report identified six registered UST sites within a one eighth-mile radius of the site.

The Middletown Central Office (7601), located at 70 Broad Street, approximately 0.06 miles northwest of the study site, was reported as containing one, 5,000-gallon gasoline UST, two, 10,000-gallon heating oil USTs, and one, 4,000-gallon kerosene UST. According to the report, the ages of the tanks range from 4 to 49 years old. Reportedly, the gasoline UST was removed and one of the heating oil USTs was closed in place.

Sears, located at 222 Main Street, approximately 0.07 miles east of the study site was reported as containing one, 1,000-gallon gasoline UST. According to the VISTA report, the UST is approximately 34 years old.

The Northern Middlesex YMCA, located at 99 Union Street, approximately 0.09 miles east of the study site was reported as containing one, 5,000-gallon heating oil UST. According to the VISTA report, the UST is approximately 28 years old.

Physical plant, located at 56 Hamlin Street, approximately 0.07 miles west of the study site was reported as containing one 1,000-gallon gasoline UST. According to the VISTA report, the UST is approximately 49 years old.

Liberty Bank, located at 315 Main Street, approximately 0.11 miles northeast of the study site was reported as containing two 6,000-gallon heating oil USTs. According to the report, the USTs are approximately 12 and 41 years old. The older UST was reported as being removed.

Middlesex Hospital, located at 28 Crescent Street, approximately 0.10 miles east of the study site was reported as containing four 15,000-gallon gasoline USTs, two 1,000-gallon gasoline USTs, two 10,000-gallon diesel and gasoline USTs, one 2,500-gallon diesel UST, and one 2,000-gallon gasoline UST. According to the report, six of the USTs have been removed. The ages of the tanks ranged from 7 to 37 years old.

### Oil and Chemical Spills

According to the VISTA database report, which summarizes spills between 1991 and 1999, and the files of the CTDEP Oil and Chemical Spills section reviewed for the years 1974-2000, several documented spills and releases have occurred within a half-mile radius of the study site. A summary of VISTA report spills, which can be found in Appendix D, and spills and releases reported at the CTDEP are summarized in the following table.

Date	Location	Incident	Case Status
4/28/00	381 Main Street	Unknown quantity of #2 fuel oil.	Cased closed.
2/7/00	City Hall 245 Dekoven Drive	Approximately 100 gallons of #2 fuel oil.	Case closed.
1/25/00	1 Court Street	Approximately 1 gallon of hydraulic oil.	Case closed.
11/18/99	600 College Street	Approximately 6 gallons of gasoline.	Case closed.
10/20/99	533 Main Street	Unknown quantity of gasoline.	Case closed.
9/25/99	302 Main Street	Approximately 2 gallons of gasoline.	Case closed.
9/3/99	575 Main Street	Approximately 2 gallons of antifreeze.	Case closed.
9/3/99	111 Church Street	Approximately 70 Yards of #2 fuel oil.	Case closed.
7/28/99	50 Walnut Street	Approximately 50 gallons of #2 fuel oil.	Case closed.
5/24/99	Hubbard Street	Approximately 5 gallons of diesel fuel.	Case closed.
3/1/99	137 Mill Street	Approximately 5 gallons of #2 heating oil due to inground tank failure.	Contained, contracted, pumped and closed.
2/11/99	Near 65 Oak Street	Approximately 2 gallons of oil.	Case closed.
1/26/99	22 Maple Street	Unknown quantity of #2 fuel oil due to leak in tank.	Contained, contracted, removed and closed.
9/29/98	Middletown Water and Sewer River Road	Approximately 5 gallons of sodium hydroxide due to container failure.	Contained and closed.

Date	Location	Incident	Case Status
9/21/98	168 East Main Street	Approximately 10 yards of hydraulic oil.	Case closed.
8/5/98	Wesleyan University 156 High Street	Approximately 1000 gallons of #2 fuel oil.	Case closed.
7/31/98	William Street	Approximately 5 gallons of gasoline.	Case closed.
7/31/98	BP Station Broad Street and William Street	Unknown quantity of gasoline.	Case closed.
6/2/98	High Street and Wyllis Street	Approximately 5 gallons of diesel fuel.	Case closed.
4/23/98	Personal Auto Care 60 Dekoven Drive	Approximately 10 gallons of waste oils and gasoline due to dumping and seepage.	Case closed.
11/21/97	393 Main Street	Approximately 5 gallons of #2 heating oil due to overfill.	Contained, removed, and closed.
11/10/97	123 Broad Street	Approximately 30 gallons of # 2 heating oil.	Case closed.
9/8/97	80 Crescent Street	Unknown quantity of paint waste and chips due to dumping on the ground.	Closed
7/15/97	547 Main Street	Approximately 6 gallons of transformer oil due to transcapacitor failure.	Cleaned, pumped out, referred and closed.
7/13/97	Union Street and Dekoven Drive	Approximately 1 gallon of gasoline and motor oil.	Case closed.
7/10/97	Middlesex Hospital	Approximately 300 gallons of #6 heating oil.	Case closed.
5/7/97	104 East Main Street	Approximately 10 yards of diesel fuel.	Case closed.
5/7/97	East Main Street and Silver Street	Gasoline contaminated soils.	Case closed.
12/15/96	41 Hotchkiss Street	Unknown quantity of mercury due to a broken thermometer (human error).	Contained, vacuummed and closed.
11/22/96	250 William Street	Approximately 10 gallons of dry cleaning waste due to container failure.	Closed
10/22/96	44 River Road	Approximately 20 gallons of heating oil due to transfer line failure.	Contracted and closed.
6/7/96	Court Street	Approximately 1 gallon of transformer oil.	Contained and removed; case closed.
7/19/95	Margaret/Franklin E. Rusconi 605 Main Street/12 Liberty Street	Unknown quantity of gasoline.	Referred and contracted; case closed.
6/5/95	Ford News 358 Main Street	Approximately 12 gallons of cooking oil.	Contained and removed; case closed.
4/11/95	Lepietas Building 392 Main Street	Unknown quantity of #2 fuel oil.	Tank and soil removed; case closed.
3/5/95	The Connection 605 Main Street	Approximately 150 gallons of #2 fuel oil .	Contracted; case closed.
9/9/94	Middletown Plate Glass 40 Union Street	Unknown quantity of gasoline.	Pumped out and tank removed; case closed.

Date	Location	Incident	Case Status
8/25/94	Crescent Street and Union Street	Unknown quantity of transformer oil.	Contained and removed; case closed.
8/25/94	100 Crescent Street	Unknown quantity of hydraulic oil.	Contained and removed; case closed.
8/25/94	Crescent Street	Approximately .25 gallons of transformer oil.	Contained and removed; case closed.
6/29/94	Wesleyan University 157 Church Street	Approximately 15 yards of #2 fuel oil.	Removed tank and soil; case closed.
4/12/94	111 Church Street	Unknown quantity of #2 fuel oil.	Case closed.
10/28/93	Court Street and Main Street	Approximately 55 gallons of liquid asphalt emulsion.	Contained, contracted, and removed; case closed.
7/16/93	Middlesex Hospital	Approximately 2 gallons of diesel fuel.	Contained, removed, and pumped out; case closed.
12/23/92	56 Hamlin Street	Approximately .75 gallons of power steering fluid.	Contained and removed; case closed.
12/3/92	Wesleyan University William Street	Unknown quantity of #6 fuel oil.	Pumped out, tank and soil removal; case closed.
11/5/92	251 Court Street	Approximately 10 gallons of oil.	Cleaned and repaired line; case closed.
7/13/92	American Red Cross 97 Broad Street	Unknown quantity of #2 fuel oil.	Removed tank and soil; case closed.
12/8/91	111 Church Street	Unknown quantity of methane.	Case closed.
11/15/91	Middlesex Hospital 28 Crescent Street	Approximately 1 gallon of diesel fuel.	Repaired line; case closed.
8/26/91	Connecticut Light and Power East Main Street	Approximately 5 gallons of PCBs due to unspecified cause.	Not Available
3/20/90	Butterfield Dormitories Lawn Avenue	Approximately 100 gallons of # 2 fuel oil due to fuel line rupture.	Contained
3/14/90	Washington Street and High Street	Approximately 3 gallons of hydraulic oil due to transfer line failure.	Contained, removed, and sanded; case closed.
11/29/89	Wesleyan University William Street	Approximately 50 gallons of #6 fuel oil due to return line failure.	Contained and removed.
11/28/89	Main Street and Court Street	Approximately 2 gallons of diesel fuel and motor oil due to motor failure.	Sanded; case closed
8/2/88	Broad and William Streets	Approximately 1500 gallons of gasoline due to inground tank failure.	Removed tank
4/30/88	Wesleyan Grounds Garage Mill Street	Approximately 50 gallons of used motor oil due to vandalism.	Soil removed and nearby stream cleaned.
3/30/88	Connecticut Light and Power East Main Street	Approximately 46 gallons of PCBs due to unspecified cause.	Not Available

Date	Location	Incident	Case Status
3/3/88	Middlesex Hospital 28 Crescent Street	Approximately 250 gallons of diesel fuel due to overfill.	Speedy dry applied; case open
3/10/87	Court Street and Broad Street	Unknown quantity of gasoline due to ruptured inground tank.	Case open
10/8/85	Cross and Vine Streets	Approximately 10 gallons of liquid waste due to unknown cause.	Sanded and swept; case closed.
4/19/85	Sears Auto Center Dekoven Drive	Approximately 20 gallons of waste oil due to tank overfill.	Not Available; case closed.
12/26/84	49 Main Street	Approximately 3 gallons of #2 fuel oil due to broken hose nozzle.	Not Available
10/12/84	C.B. Stone Warwick Street	Approximately 200 gallons of oil due to inground tank failure.	Contained, removed, contracted and pumped out; case closed.
8/13/84	Municipal Building Dekoven Drive	Approximately 150 gallons of oil due to dumping.	Contained and removed.
2/11/81	Oak Street and Warwick Street	Approximately 25 gallons of #2 fuel oil due to hose failure.	Not Available

## 6.0 FINDINGS AND RECOMMENDATIONS

The study site, 62-66 Church Street, is approximately .73 acres and contains landscaped areas, asphalt paved parking areas, and a two-story concrete block and brick building constructed in approximately 1925, and added on to in approximately 1948. The property is currently owned by the City of Middletown and is currently vacated. According to historic Sanborn Fire Insurance Maps and Middletown City Street Directories, the study site building has been used, historically, as a technical school from approximately 1925 to 1963, and police station from approximately 1963 to 1999. According to the 1950 Sanborn Map, the northern section of the study site building was utilized as an automobile repair area, presumably, in conjunction with the technical school. According to a property map of 66 Church Street dated August 1923, the study site contained a residential dwelling on the southwestern section of the site. The eastern area of the study site, identified as 62 Church Street, has been used, historically, for residential purposes from approximately 1884 to 1970, and as a parking area from approximately 1970 to present.

### Findings

The study site building was observed to have experienced excessive water damage since the Middletown Police Department vacated the site in approximately September 1999. Significant damage to ceiling and floor tiles, sheetrock walls, and the remaining equipment left in the building was observed. A heavy odor of mold and decomposition was observed throughout the study site building. In many areas throughout the study site building mold and fungi were observed growing on wall, floor, and furniture surfaces. Respirators and protective clothing (rubber gloves, tyvek suits) were used in this assessment. Electrical power to the study site has been disconnected, therefore, flashlights were used where sufficient lighting was not available.

According to a CTDEP Spill Report dated February 20, 1991, an unknown quantity of gasoline was discharged at the study site from a leaking UST. According to the report, the UST was removed and ground water may have been affected.

According to visual observation, one, gasoline UST is located adjacent to the northwestern section of the study site building. A fuel dispensing pump, catch basin, fill pipe, and vent pipe were observed in this area. Apparently, this UST was used to fuel police vehicles. According to a Middletown Police Department letter to the CTDEP dated March 7, 1991, one, 3,000-gallon gasoline UST was removed from the site on March 1, 1991. The tank was removed because it did not meet Nation Fire Protection Association (NFPA) 329 criteria (Tightness Test). The former gasoline UST was likely removed from the area of the current gasoline UST. Additional information regarding the tank removal was not found in Municipal or State files. Information regarding additional USTs on the study site was not found in Municipal or State files.

According to the 1950 Sanborn Map of the study site, the northern section of the study site building was identified as an automobile repair area, presumably, in conjunction with the technical school. Floor drains were observed throughout the northern section and central section of the study site building. Information regarding the discharge points of these floor drains was not located in Municipal or State files.

A firing range was observed on the northern section of the study site building. This area was observed to contain firing booths, a target butt area, and stored computer equipment. Apparently, this area was used by the police department for firearm practice. A target butt area was located at the northern section of the firing range which was used to collect spent bullets which were discharged from the firearms. The target butt area was observed to contain gravel, sand, and slag within a wood bermed area in which spent bullets were collected. Significant water damage was not evident in the firing range area. No hazardous materials were observed in this area. No staining was observed in this area.

Various containers of kerosene, hydraulic oil, refrigeration oil, pump oil, Arcton 22 (chlorofluoromethane), and suspect mercury containing bulbs were observed throughout the northern and central section of the study site building.

According to Middletown Police Department personnel, the study site building utilized natural gas to heat the building for approximately 20 years (1979) prior to the building being vacated. Both Yankee Gas and Connecticut Natural Gas were contacted for information regarding how long the study site had utilized natural gas. Both companies did not have information on record regarding the site (66 Church Street). However, Yankee Gas did have information regarding 64 Church Street which may have been the address of the study site at the time of gas connection. Yankee Gas personnel stated that 64 Church Street was serviced from October 1997 to October 1999. Information prior to October 1997 was not available with Yankee Gas personnel. Information regarding a heat source prior to approximately 1979 was not located in Municipal or State files nor was any information regarding any fuel oil USTs at the study site. A natural gas powered generator is located on the northern section of the study site building.

### Recommendations

Based on the results of the Phase I ESA, Marin recommends that a Phase II ESA be conducted to determine if a release to the environment has occurred. Marin recommends that test borings and temporary piezometers be installed adjacent to the on-site gasoline UST in order to assess soil and ground water quality. This assessment would be conducted to verify or deny the presence of petroleum in the soil and ground water due to past or present leaks. Soil and ground water samples should be collected for analysis of total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and lead. If the UST will not be used as part of future development, Marin recommends that it be removed by a licensed contractor. During removal, the soil conditions should be evaluated by a qualified consultant and post-closure sampling should be conducted per CTDEP protocols.

Due to historical use of the northern section of the study site building by the technical school for potential automobile repair training, the floor drains located within the northern and central areas of the study site building should be investigated by using a dye test to confirm the discharge points of the drains. Information regarding the discharge points of the drains was not found in Municipal or State files.

The material located in the target butt area of the firing range located in the northern section of the study site building should be sampled and analyzed for lead content both by mass and TCLP analysis. This should be performed to evaluate disposal options and proper manifesting for the material.

Various containers of kerosene, hydraulic oil, refrigeration oil, pump oil, Arcton 22 (chlorofluoromethane), and suspect mercury containing light bulbs were observed throughout the northern and central sections of the study site building. These materials should be disposed of off-site according to Local and State regulations by a licensed contractor.

Lastly, since no information was found in Municipal or State files regarding a heat source prior to approximately 1979, it is possible that the study site may contain an abandoned fuel oil UST. It is recommended that a qualified consultant occasionally inspect the site for potential USTs during site demolition and sub-surface activities.

## 8.0 LIMITATIONS

This report was completed by Marin Environmental, Inc. (Marin) for the sole use of the City of Middletown in connection with an assessment of on-site environmental conditions. Use of the report by any other person for any other purpose is not authorized except with the prior written consent of Marin.

The scope of work conducted did not include a facility compliance audit with respect to Local, State, or Federal laws and regulations. The work was undertaken to assess environmental conditions specifically on the study property in accordance with generally accepted engineering and hydrogeological practices. No other warranty, express or implied, is made. Absolute assurance that any and all possible contamination at the site was identified cannot be provided.

The report conclusions are based, in part, on information provided by the client, their agents, or third parties, including state or local officials. Marin assumes no responsibility for the accuracy and completeness of this information.

Where visual observations are included in the report, they represent conditions at the time of the inspection, and may not be indicative of past or future site conditions. Observations were limited due to interior building debris, hazardous access conditions, and limited lighting.

The scope of work completed for this assessment did not include the sampling and chemical testing of sediment, septic liquid or sludge, asbestos containing building materials (ACBMs), surface water, ground water, soil, polychlorinated biphenyl's (PCBs) containing fluids, or lead based paint.

Sanborn Fire Insurance maps were reviewed at the State Library in Hartford, Connecticut. The Sanborn Fire Insurance maps on file at the State Library consist of the Library of Congress map collection. Although the Library of Congress map collection is an extensive collection of historical Sanborn Fire Insurance Maps, it is not a complete collection, and additional maps (if

any) that are not part of this collection may cover the study site but were not reviewed by Marin. Any such additional maps are considered by Marin to not be reasonably ascertainable and to not be publicly available.

## Administration Division

P.O. BOX 929  
66 CHURCH STREET  
MIDDLETOWN, CT 06457  
(203) 347-6941

March 7, 1991

RECEIVED  
MIDDLETOWN  
MAR 21 1991

State of Connecticut  
Department of Environmental Protection  
165 Capitol Avenue  
Hartford, CT 06106

ATTENTION: Mark DeCaprio - Senior Emergency  
Response Coordinator

Dear Mr. DeCaprio:

Please be advised that on the above date we received the enclosed  
Certificate of Completion from Keystone I & S.

As you are already aware, the 3,000 gallon gasoline tank did not pass  
the hydrostatic test and as a result the tank has been removed as of  
March 1, 1991.

If more information is necessary, please feel free to contact me.

  
Sergeant Relford M. Ward, Sr.  
Administration Supervisor

Chief George Dunn - Fire Department  
Bob Barron - Risk Manager  
Salvatore Fazzino - Dept. of Public Works  
Jeanne Dahlmeyer - Budgeting

(DISPLAY BY TANK)

# CERTIFICATE OF COMPLETION

PRESENTED TO

MIDDLETOWN POLICE DEPARTMENT  
(COMPANY)

FOR THE COMPLETION OF A PRECISION "TIGHTNESS" TEST ON AN UNDERGROUND STORAGE TANK SYSTEM IN ACCORDANCE WITH LOCAL, STATE & FEDERAL REGULATIONS AND ORDINANCES.

DATE OF TEST February 26, 1991 TEST METHOD EZY-Check

PLACE OF TEST Middletown Police Department, 66 Church St., Middletown, CT

DESCRIPTION OF TANK 3,000 Gallon, Unleaded Gasoline Tank

RESULT Does Not Meet NFPA 329 Criteria CONFIDENCE LEVEL 95%

KEYSTONE I & S  
(CONTRACTOR)

244 Queen Street

(ADDRESS)

Southington, CT 06489

203-628-0891

*Jeffrey Aybar*  
Jeffrey Aybar

**Precision Testing**, as defined by the National Fire Protection Association (NFPA 329), means a test that takes into consideration the temperature coefficient of expansion of the product being tested as related to the temperature change during the test and is capable of detecting a loss of 0.05 gallons per hour in a 12,500 gallon or smaller tank system.

The Criteria established of + or - 0.05 gallons per hour is a mathematical calculation based on actual product volume change and temperature change and is not intended as a permission of a leak.

**Testing Conditions:**

Tank capacity was supplied by CLIENT.

The coefficient of expansion was determined by KEYSTONE I & S.

The test was to include the tank and attached piping.

The 3,000 gallon, UNLEADED GASOLINE Tank was tested under a hydrostatic pressure of 3.64 psi at tank bottom. The tank system was tested for 1 hour after stable conditions were reached. During the period of the test, the change in temperature corresponded to an average volume change of +.1068 gallons per hour. The actual liquid volume average was -.2468 gallons per hour. The final mathematical result of -.3536 gallons per hour DOES NOT MEET NFPA 329 criteria. There was NO water recorded at tank bottom.

**Recommendations:**

The tank / Tank and attached piping DOES NOT MEET 22a-449(d)-1 requirements. NOTIFY THE CT DEP at 203-566-3338 IMMEDIATELY. Expose the tank top and isolate lines. Check fittings. Retest.

**Disclaimers:**

Many factors effect the results of precision testing of underground tanks including, but not limited to, entrapped air-vapor pockets, water table variations, tank-end deflections, product expansion and contraction, wind, evaporation, barometric pressure, etc. Contractor's personnel are trained to understand and, where possible, to adjust for these factors during the performance of a precision test. However, some or all of these factors may not be controllable and therefore, the Contractor DOES NOT EXPRESS OR IMPLY any warranties or guarantees to the accuracy of the results. The Contractor's sole and exclusive warranty is that the Contractor's instrumentation has the precision necessary to meet NFPA 329 criteria and is an acceptable testing method.

The results of the Contractor's test are only valid under the specific operating conditions of the precision test and only apply to the condition of the underground tank at the time of the test. The Contractor DOES NOT EXPRESS OR IMPLY any past or future responsibility as to the condition of the underground tank system. Furthermore, the Contractor is not responsible for any on-going leakage below the limits of the measurement accuracy of the testing method.

**Indemnity:**

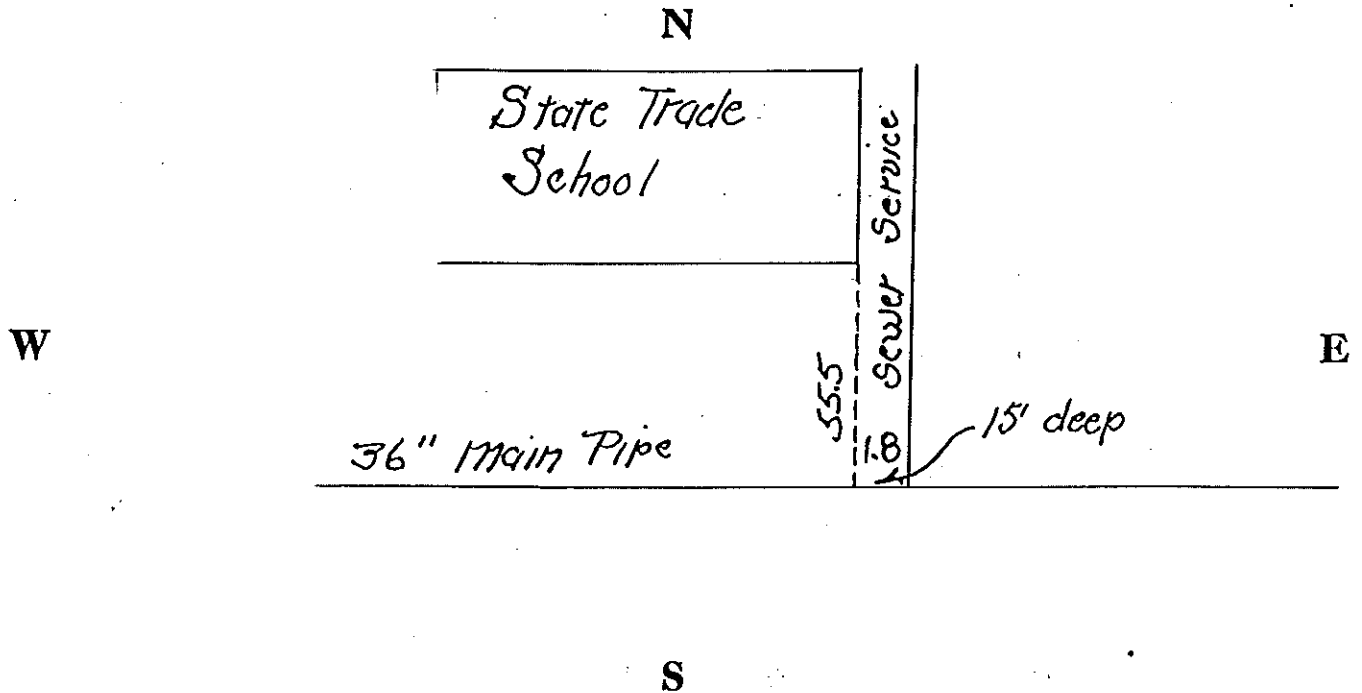

Company will indemnify, defend, and hold Contractor harmless from any and all loss, damages, suits, penalties, costs, liabilities and expenses (including, but not limited to, reasonable investigation and legal expenses) arising out of any claim for loss of or damage to property, human health or the environment. This limitation of Contractor's liability includes, but is not limited to, no liability for any spills, leaks, or discharges of any substance to the environment and the cost of clean-up, remedial action or any other cost, expense or damage from such spill, leak or discharge.

**Notices:**

Regulations require that notice be given in the event of a spill or of a failed precision test. In all cases, adherence to this notification requirement is the responsibility of the Company unless the Contractor has written authority from the Company to report such releases. The responsible agency and its telephone number is:

**Testing Certificate:** This precision testing certificate should be maintained by the owner of the facility for at least five years. The certificate should be displayed in a prominent area near the tank system.

FEB 20 1981

HAZARDOUS MATERIALS  
MANAGEMENT UNIT

REPORT OF PETROLEUM OR CHEMICAL PRODUCT  
DISCHARGE, SPILLAGE, SEEPAGE, FILTRATION

The following information is submitted concerning petroleum or chemical product discharge reported verbally to the Department of Environmental Protection/State Police at Middletown, Conn. on 2-11-1981 at 8:30 A.M.  
Fire Dept. (location) (date) (time)  
by Kenneth D. Miles.  
(name)

1. Time and date of discharge, spillage, etc.  
Approximately 8:00 A.M., Feb. 11, 1981
2. Location, to include name of town, river, highway, distance from intersection, etc., of the pollution or contamination.  
Oak Street at intersection of Warwick St., Middletown, Ct.
3. Type of oil, petroleum or chemical pollutant or contaminant.  
#2 Fuel Oil
4. Quantity of discharge, spillage, seepage, filtration.  
Approximately 20 to 25 gallons.
5. Cause of pollution or contamination:
  - a. Type of vessel, vehicle, containers, etc., which contained the pollutant or contaminant  
Fuel Oil Delivery truck.
  - b. Describe in detail what actually occurred to cause discharge, spillage, seepage, filtration.  
Failure of coupling on discharge piping of truck.

- c. If pollutant or contamination was a result of discharge, spillage, seepage, filtration from a moving vessel or vehicle, give location of departure and destination.

Vehicle left plant at 53 Warwick St., Middletown to  
Start local deliveries of fuel oil.

6. Name and address of owner of ship, boat or other vessel, terminal, establishment, vehicle, trailer or machine causing such pollution or contamination.

C.B. Stone Inc., 53 Warwick St. Middletown, Conn.

7. Name and address of person making this report.

Kenneth D. Miles C/O C.B. Stone, Inc.

53 Warwick St.  
Middletown, Conn.

8. Title, or relationship to owner, of person making report.

Director - Fuel Services

All statements contained herein are true to the best of my knowledge.

REPORT OF PETROLEUM OR CHEMICAL PRODUCT  
DISCHARGE, SPILLAGE, SEEPAGE, FILTRATION

The following information is submitted concerning petroleum or chemical product discharge reported verbally to the Department of Environmental Protection/State Police at Hartford, Conn. on 12-27-84 at 1:30 P.M.  
(location) (date) (time)  
by Kenneth D. Miles.  
(name)

1. Time and date of discharge, spillage, etc.

4:00 P.M., Dec. 26, 1984

2. Location, to include name of town, river, highway, distance from intersection, etc., of the pollution or contamination.

Driveway in rear of 49 Main St., Middletown, Ct.

3. Type of oil, petroleum or chemical pollutant or contaminant.

#2 Fuel Oil

4. Quantity of discharge, spillage, seepage, filtration.

Prox. 2 To 3 Gallons

5. Cause of pollution or contamination:

- a. Type of vessel, vehicle, containers, etc., which contained the pollutant or contaminant

Fuel Oil Delivery Truck

- b. Describe in detail what actually occurred to cause discharge, spillage, seepage, filtration.

Nozzle hit Truck while being reeled back  
To Truck and opened Trigger of nozzle

- c. If pollutant or contamination was a result of discharge, spillage, seepage, filtration from a moving vessel or vehicle, give location of departure and destination.

C.B. Stone, Inc., 53 Warwick St., Middletown, Ct.

6. Name and address of owner of ship, boat or other vessel, terminal, establishment, vehicle, trailer or machine causing such pollution or contamination.

C.B. Stone, Inc., 53 Warwick St., Middletown, Ct. 064

RECEIVED  
FEB 10 1964  
FEDERAL BUREAU OF INVESTIGATION  
U.S. DEPARTMENT OF JUSTICE  
WASHINGTON, D.C.

7. Name and address of person making this report.

Kenneth D. Miles, 312 Glendale Dr., Bristol, Ct. 061

8. Title, or relationship to owner, of person making report.

Director - Fuel Services

All statements contained herein are true to the best of my knowledge.

Kenneth D. Miles

OIL & CHEMICAL  
SPILL SECTION

REPORT OF PETROLEUM OR CHEMICAL PRODUCT  
DISCHARGE, SPILLAGE, SEEPAGE, FILTRATION

The following information is submitted concerning petroleum or chemical product discharge reported verbally to the Department of Environmental Protection/State Police at State DEP OFFICE, HFD on MARCH 3, 1988 at ~ 8:25 AM  
(location) (date) (time)  
by DOUGLAS P. RAINBOLT.  
(name)

1. Time and date of discharge, spillage, etc.

7:45 - 8 AM MARCH 3, 1988

2. Location, to include name of town, river, highway, distance from intersection, etc., of the pollution or contamination.

MIDDLESEX MEMORIAL HOSPITAL 28 CRESCENT ST MIDDLETOWN CT  
Basement Generator Room - ~~East wing~~ / OLD BOILER RM

3. Type of oil, petroleum or chemical pollutant or contaminant.

Diesel Fuel

4. Quantity of discharge, spillage, seepage, filtration.

76 GALLONS

5. Cause of pollution or contamination:

- a. Type of vessel, vehicle, containers, etc., which contained the pollutant or contaminant DIESEL FUEL OIL DAY TANK

(50 GAL CAPACITY) ON EMERGENCY GENERATOR

- b. Describe in detail what actually occurred to cause discharge, spillage, seepage, filtration.

When Filling the day tank the operator forgot  
to shut off the oil pump. Consequently  
THE FUEL OVERFLOWED FROM THE  
VENT PIPE, Spilling onto the Floor.

- c. If pollutant or contamination was a result of discharge, spillage, seepage, filtration from a moving vessel or vehicle, give location of departure and destination.

N/A

6. Name and address of owner of ship, boat or other vessel, terminal, establishment, vehicle, trailer or machine causing such pollution or contamination.

MIDDLESEX MEMORIAL HOSPITAL

28 CRESCENT ST

MIDDLETOWN, CT 06457

7. Name and address of person making this report.

DOUGLAS P. RAINBULT, ASSIST. DIRECTOR OF ENGINEERING  
MIDDLESEX MEMORIAL HOSPITAL

8. Title, or relationship to owner, of person making report.

ASSIST. DIR. ENG. PLANT OPERATIONS

All statements contained herein are true to the best of my knowledge.

REPORT OF PETROLEUM OR CHEMICAL PRODUCT  
DISCHARGE, SPILLAGE, SEEPAGE, FILTRATION

The following information is submitted concerning petroleum or chemical product discharge reported verbally to the Department of Environmental Protection/State Police at Wesleyan University on April 30, 1988 at 9:00 A.M.  
(location) (date) (time)  
by Arthur J. Pongratz.  
(name)

1. Time and date of discharge, spillage, etc.  
Night/early morning of April 30, 1988
2. Location, to include name of town, river, highway, distance from intersection, etc., of the pollution or contamination.  
Middletown, CT., Mill Street, Wesleyan Grounds  
Garage (see attached map).
3. Type of oil, petroleum or chemical pollutant or contaminant.  
Motor Oil
4. Quantity of discharge, spillage, seepage, filtration.  
Approximately 50 gallons
5. Cause of pollution or contamination:
  - a. Type of vessel, vehicle, containers, etc., which contained the pollutant or contaminant 55 gallon drums  
of used motor oil.
  - b. Describe in detail what actually occurred to cause discharge, spillage, seepage, filtration.  
Vandalism to barrels caused seepage  
into parking lot.

01V1303P

- c. If pollutant or contamination was a result of discharge, spillage, seepage, filtration from a moving vessel or vehicle, give location of departure and destination.

Not applicable.

6. Name and address of owner of ship, boat or other vessel, terminal, establishment, vehicle, trailer or machine causing such pollution or contamination.

Wesleyan University - Department of Physical Plant  
186 College Street  
Middletown, CT. 06457

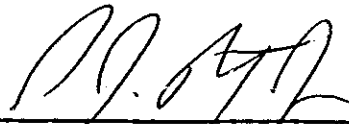

7. Name and address of person making this report.

Arthur J. Pongratz - Same

8. Title, or relationship to owner, of person making report.

Director of Facilities Operations and Management

Underground Tanks:	<i>2</i>		
Aboveground Tanks:	<i>NOT REPORTED</i>		
Tanks Removed:	<i>2</i>		

# ASTM Phase I Radius Search Report

## DESCRIPTION OF DATABASES SEARCHED

### A) DATABASES SEARCHED TO 1 MILE

- NPL**  
**SRC#: 19**
- VISTA conducts a database search to identify all sites within 1 mile of your property.  
The agency release date for NPL was January, 2000.
- The National Priorities List (NPL) is the EPA's database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund program. A site must meet or surpass a predetermined hazard ranking system score, be chosen as a state's top priority site, or meet three specific criteria set jointly by the US Dept of Health and Human Services and the US EPA in order to become an NPL site.
- SPL**  
**SRC#: 195**
- VISTA conducts a database search to identify all sites within 1 mile of your property.  
The agency release date for Site Discovery and Assessment Database - State Priority Sites was November, 1999.
- This database is provided by the Department of Environmental Protection. The agency may be contacted at: 860-424-3721.
- CORRACTS**  
**SRC#: 14**
- VISTA conducts a database search to identify all sites within 1 mile of your property.  
The agency release date for HWDMS/RCRIS was December, 1999.
- The EPA maintains this database of RCRA facilities which are undergoing "corrective action". A "corrective action order" is issued pursuant to RCRA Section 3008 (h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility's boundary and can be required regardless of when the release occurred, even if it predates RCRA.
- RCRA-Tsd**  
**Corracts**  
**SRC#: 556**
- VISTA conducts a database search to identify all sites within 1 mile of your property.  
The agency release date for HWDMS/RCRIS was December, 1999.
- The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste.

**B) DATABASES SEARCHED TO 1/2 MILE**

**CERCLIS**  
**SRC#: 17** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for CERCLIS was October, 1999.

The CERCLIS List contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL. The information on each site includes a history of all pre-remedial, remedial, removal and community relations activities or events at the site, financial funding information for the events, and unrestricted enforcement activities.

**NFRAP**  
**SRC#: 18** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for CERCLIS-NFRAP was October, 1999.

NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.

**SCL**  
**SRC#: 194** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for Site Discovery and Assessment Database - State Cleanup Sites was November, 1999.

This database is provided by the Department of Environmental Protection. The agency may be contacted at: 860-424-3721.

**SCL**  
**SRC#: 196** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for Site Discovery and Assessment Database - Monitored Sites was November, 1999.

This database is provided by the Department of Environmental Protection. The agency may be contacted at: 860-424-3721.

**ERNS**  
**SRC#: 8** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for was August, 1999.

The Emergency Response Notification System (ERNS) is a national database containing records from October 1986 to the release date above and is used to collect information for reported releases of oil and hazardous substances. The database contains information from spill reports made to federal authorities including the EPA, the US Coast Guard, the National Response Center and the Department of Transportation. The ERNS hotline number is (202) 260-2342.

**RCRA-TSD**  
**SRC#: 12** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for HWDMS/RCRIS was December, 1999.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA TSDs are facilities which treat, store and/or dispose of hazardous waste.

**SWLF**  
**SRC#: 187** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for Inactive Solid Waste Sites was January, 1994.

This database is provided by the Department of Environmental Protection. The agency may be contacted at: .

**SWLF**  
**SRC#: 188** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for General Permits List was July, 1997.

This database is provided by the Department of Environmental Protection, Waste Planning and Standards. The agency may be contacted at: 860-424-3240.

**SWLF**  
**SRC#: 191** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for Solid Waste Facilities was February, 1999.

This database is provided by the Department of Environmental Protection, Waste Management Bureau. The agency may be contacted at: 860-424-3366.

**SWLF**  
**SRC#: 899** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for Recycling Facilities General Permit List was January, 2000.

This database is provided by the Department of Environmental Protection, Waste Management Bureau. The agency may be contacted at: 860-424-3240.

**SPILL**  
**SRC#: 192** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for Oil and Spills Database was June, 1999.

This database is provided by the Department of Environmental Protection, Waste Bureau. The agency may be contacted at: 860-424-3262.

The Connecticut Department of Environmental Protection Oil and Spills Database began in 1991.

**LUST**  
**SRC#: 193** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for Leaking Underground Storage Tank List was June, 1999.

This database is provided by the Department of Environmental Protection, UST Program. The agency may be contacted at: 860-424-3376.

The Connecticut Department of Environmental Protection Leaking Underground Storage Tank List includes an entry for each leak found at a particular site. The Department does not, however, include tank or leak numbers in their report so that each entry may be designated in any way.

**Water Wells**  
**SRC#: 3** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for USGS WATER WELLS was March, 1998.

The Ground Water Site Inventory (GWSI) database was provided by the United States Geological Survey (USGS). The database contains information for over 1,000,000 wells and other sources of groundwater which the USGS has studied, used, or otherwise had reason to document through the course of research. The agency may be contacted at 703-648-6819.

**State Water Wells**  
**SRC#: 190** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
The agency release date for Public Supply Well Database was September, 1997.

The Connecticut water wells data are reported from the EPA Region 1 Public Supply Well Database. The data is provided by Region 1 of the EPA. The agency phone number for further information is 617-565- 4156.

**Finds** VISTA conducts a database search to identify all sites within 1/2 mile of your property.  
**SRC#: 6** The agency release date for FINDS was February, 1999.

The Facility Index System (FINDS) is a compilation of any property or site which the EPA has investigated, reviewed or been made aware of in connection with its various regulatory programs. Each record indicates the EPA Program Office that may have files on the site or facility.

#### C) DATABASES SEARCHED TO 1/8 MILE

**RCRA-LgGen** VISTA conducts a database search to identify all sites within 1/8 mile of your property.  
**SRC#: 16** The agency release date for HWDMS/RCRIS was December, 1999.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Large Generators are facilities which generate at least 1000 kg./month of non-acutely hazardous waste ( or 1 kg./month of acutely hazardous waste).

**RCRA-SmGen** VISTA conducts a database search to identify all sites within 1/8 mile of your property.  
**SRC#: 15** The agency release date for HWDMS/RCRIS was December, 1999.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Small and Very Small generators are facilities which generate less than 1000 kg./month of non-acutely hazardous waste.

**RCRA-Viols/Enf** VISTA conducts a database search to identify all sites within 1/8 mile of your property.  
The agency release date for HWDMS/RCRIS was December, 1999.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Violators are facilities which have been cited for RCRA Violations at least once since 1980. RCRA Enforcements are enforcement actions taken against RCRA violators.

**UST's** VISTA conducts a database search to identify all sites within 1/8 mile of your property.  
**SRC#: 197** The agency release date for Underground Storage Tank Listing was January, 2000.

This database is provided by the Department of Environmental Protection, UST Program. The agency may be contacted at: 860-424-3662; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.

**TRIS** VISTA conducts a database search to identify all sites within 1/8 mile of your property.  
**SRC#: 2** The agency release date for TRIS was January, 1998.

Section 313 of the Emergency Planning and Community Right-to-Know Act (also known as SARA Title III) of 1986 requires the EPA to establish an inventory of Toxic Chemicals emissions from certain facilities( Toxic Release Inventory System). Facilities subject to this reporting are required to complete a Toxic Chemical Release Form(Form R) for specified chemicals.

End of Report
